Inferring groups related to a Network Organization

Part 1: step 1 or 2

1. Focus on a network organization (NO); i.e., a hashtag or a group without a place. Find incoming links to NO with high/low trust.
2. Look for similarities among nodes that lead to high/low trust/distrust links. High trusting nodes are supporters of NO whereas high distrusting nodes are opposition groups to NO.

Part 2: Step 3

3. Apply ideas from part 1 to demonstrate on a prototypical Implementation.
